Category:Managed file transfer software Category:2018 softwareQ: Oracle Listagem de coluna em select com o Join Eu tenho o seguinte código: create table tabela_01 (coll integer, col2 integer); insert into tabela_01 values (1, 2); insert into tabela_01 values (3, 4); create table tabela_02 (coll integer, col2 integer, col3 varchar2(10)); insert into tabela_02 values (1, 2, '1'); insert into tabela_02 values (3, 4, '5'); create view v_01 as select t.coll from tabela_01 t left join tabela_02 l on t.coll = l.coll; select * from v_01; Saida dessa consulta: 2 4 Quando eu tento listar a coluna que eu os critérios do select, com o join, eu não consigo: create view v_02 as select col3 from tabela_01 t left join tabela_02 l on t.coll = l.coll; select * from v_02; Saida: ORA-00904: "COL3": invalid identifier Obs.: Eu tentei utilizar o próprio problema, mas ele deu o mesmo erro. A: Para listar os campos na tabela_02 lista de verdadeiros erros o mais lógico é utilizar o utilidade: SQL> select * from tabela_02 where l=2; 2 / select * from tabela_02 where l=2 * ERROR at line 1: ORA-00904: "1": invalid identifier Repare que no campo '1' não teria um identificador e assim seria suprimido. Mais: SQL> select * from tabela_02; 2 /

Emerging evidence supports that tumor microenvironment (TME) governs tumor cell proliferation and metastasis by regulating cellular microRNA (miRNA) expression. To identify the TME-regulated miRNAs to help elucidate pathogenesis of brain cancer, the levels of miRNAs in TME and in patient serum were compared. We report that miR-128 is upregulated in tumor microenvironment of multiple brain tumors as compared to their normal brain counterparts. This microRNA targets the hedgehog (HH) signaling components, PTCH-1 and SMO. Anti-miR-128 drastically inhibits the expression of HH signaling components and attenuates the in vitro growth of tumor cells, suggesting that miR-128 might regulate tumor growth by modulating HH signaling. Thus, targeting tumor microenvironment-regulated miRNAs might be a promising approach for treatment of brain tumors.Widespread expression of interleukin-2 receptor p55alpha chain and interleukin-2 receptor p75 chain on T cells at the first histocompatibility antigen-driven response in mice. A detailed analysis of the expression of cell-surface molecules on gammadelta T cells stimulated in vitro showed that the repertoire of gammadelta T cells that responded to foreign antigen was a set of T cell receptors bearing a gammadelta TCR specific for self peptides presenting in the context of MHC class I and II. The majority of the gammadelta TCR(+) cells expressed the T cell receptor (TCR) alpha and beta chains, whereas few cells were CD4(+) CD8(+) double-positive cells. Some gammadelta T cells expressed IL-2R p55alpha chain and IL-2R p75 chain. In particular, the majority of IL-2R p55alpha chain(+) cells also expressed IL-2R p75 chain. Thus, the response in vivo at the first histocompatibility antigen-driven response was highly biased, consisting predominantly of gammadelta T cells expressing the interleukin-2 receptor alpha-chain but few CD4(+) CD8(+) double-positive T cells expressing the interleukin-2 receptor.Q: HTML Tables - Layout of Fixed Width Tables for Use in 3da54e8ca3
