Cardiovascular disease, obesity, and diabetes continue to be major health issues in both developed and developing countries. The relationship between oral and systemic health is more common than is commonly recognized. The purpose of this study was to review the existing literature on the relationship between oral and systemic health and to define the scope and focus for future research in this area. An information search (MEDLINE, EMBASE, International Pharmaceutical Abstracts, and the Cochrane Library) was conducted to identify published articles from 1996 to 2011. Inclusion criteria were as follows: clinical studies, systematic reviews, and review articles. Thirteen articles were identified that met the inclusion criteria. The literature review indicated that the relationship between oral health and systemic health was evident at a cellular level, through multiple mechanisms of action, and at a health outcomes level. In addition, there was a need for improved health outcomes measures related to oral and systemic health.-- Table of different types of locale names -- -- CREATE TABLE locale_types (type_name VARCHAR(32) NOT NULL, display_name VARCHAR(32) NOT NULL); -- Table of available locale names
