Copy the key (found in the autocad.exe.sig file) and paste it in the Revit command window. You should be prompted to paste the key. If you paste the key, you should see a success message like this one. If the key is not accepted, try removing the spaces and the period in front of the key. Once you have the key, run Revit. It means that the next time you use Revit the program will start clean and that it will not have to work harder to process the file. If you use the key for the first time, the build will be able to start and start using the file faster.
