As file formats continue to evolve, so do the vulnerabilities that attack those file formats. In fact, the.DOC file format is one of the most popular, and the most secure file formats in the office world. The downside to this format, however, is that.DOC files have a reputation for being the most complex file types to view. Now, All Viewer has that reputation removed with version 4.0 of their software for viewing.DOC files. All Viewer For.DOC files allows you to view any.DOC file format without having to learn any special viewing tricks. With All Viewer, you can view.DOC,.DOCX,.DOCI,.DOCZ, and.DOCM file types with no trouble at all. In fact, All Viewer is so effective at viewing.DOC files, you won't even need any other software because the viewer is all you'll need to read and edit any.DOC file. If you try to view a.DOC file in Microsoft Word, for example, you might find that it's impossible for the.DOC file to get opened on Word. So, to fix the problem, you need a different software to view that file type. With All Viewer, there is no need to install any other file viewers like Microsoft Word because the.DOC file viewer can be used for both.DOC and.DOC file formats. The reader works by saving the.DOC file in the user directory, so when the user want to open the file, they just click on the file instead of having to first open it from the program. All Viewer does take a little longer to view.DOC files, but the advantage is that you can view it on any computer, including your mobile device. Since it doesn't

On-Screen NumPad

If you are looking for an efficient, handy and convenient tool to perform basic math operations then On-Screen NumPad is the app that you want to use. This application allows you to add, subtract, multiply, divide and obtain the square root of a number easily. Apart from that, you can also set up the units, currencies and even display your data in kilometers, miles or meters. The calculator also works on various measurement units, so you can easily change the measurement unit at any time. On-Screen NumPad can be configured using a simple on-screen interface. You can access to the app configuration menu by right-clicking on its icon, and then hit the key combination Ctrl + L. The configuration menu displays the following options: Show the time Settings of the units Settings of the currencies Display of the numbers Display of the units The NumPad can handle decimal numbers that go up to 9999999999999999 It contains four measurement units: Kilometers Miles Meters Yards The Program runs on: Windows 7, Windows 8, Windows 8.1, Windows 10, Windows NT, Windows 2000, Windows XP and Windows Vista On-Screen NumPad is a small software application that allows user to perform basic math operations. Aesthetically it is not very impressive, as it packs a simplistic interface. You don't need special tutorials or a help menu to get an idea of how this program works. The developer created this application to help you perform math operations in the easiest way possible. The virtual calculator can be easily moved to any area of your desktop. Since there aren't any configuration settings, the app doesn't provide parameters for resizing the main window. You can change its size only by modifying the INI file. This is a simple-to-use tool that doesn't provide any configuration settings, which could be only good news for all users who want to perform several math operations quickly. However, more experienced users may find it pretty inconvenient to work with this tool because it doesn't comprise many useful options. We would have liked to see support for more complex math calculations, and configurable parameters that could help us pick the measurement unit. You are only allowed to make the following math operations: addition, subtraction, multiplication and division. Unfortunately, you cannot customize the look of the application by adjusting
